EDUCATION

Oregon State University

B.S. Computer Science

Corvallis, OR

Expected Jun. 2026

Jan. 2024 – Present

- Dean's List
- Teaching Assistant for Intro to Computer Science II
- New Member Educator and Webmaster at Sigma Chi
- **Relevant Coursework to be Completed by Summer 2025:**
 - * Machine Learning, Deep Learning I & II, Robot Motion Planning, Probabilistic Robotics, Applied Robotics, Spatial/Temporal Data Visualization, Operating Systems, Computer Networks

EXPERIENCE

Undergraduate Research Assistant

Sep. 2024 – Present

Collaborative Robotics and Intelligent Systems Institute

Corvallis, OR

- Partnered with a faculty member and graduate researchers to develop an autonomous agricultural robot capable of navigating orchard rows and performing precision tasks such as apple picking and pruning branches.
- Enhanced apple localization accuracy by 20% by optimizing Kalman filter measurement and state models.
- Improved synthetic data generation for reinforcement learning by refining orchard tree texturing in Blender.

Autonomous Systems Engineer

Feb. 2024 – Present

Global Formula Racing

Corvallis, OR

- Collaborated with a global, cross-functional team of 10+ in preparing software for international autonomous racecar competitions, independently managing projects from conception to integration.
- Led integration of SLAM and Sensor Fusion following a major rework, improving localization accuracy by 15%.
- Reduced debugging time by ~40% via health check migration from terminal debugging to system-wide diagnostic nodes, including SLAM, LiDAR, YOLO, camera, sensor fusion, and boundary and trajectory planning.

Software Engineer Intern

Jun. 2024 – Sep. 2024

SiFly Aviation

Santa Clara, CA

- Delivered safety-critical UAV software and a cloud-based fleet management platform in a startup environment, collaborating closely with a cross-functional team of 10 hardware, embedded, and drone experts.
- Enabled ML analytics via a cloud-based service for long-term telemetry data storage via PostgreSQL and Django.
- Developed an on-board network benchmarking service to monitor latency, bandwidth, and signal strength, driving a 30% increase in mission-critical data flow consistency.
- Implemented user auth middle-ware for Janus, a video conferencing WebRTC server, enhancing security and eliminating unauthorized access incidents.
- Designed and developed 30+ RESTful API endpoints within 3 weeks using Django, establishing the foundation for user management, drone onboarding, and campaign management to meet aggressive MVP deadlines.

Application Developer

Jun. 2022 – Jun. 2023

ClearScale

San Francisco, CA

- Developed a web application and RESTful API for monitoring cloud infrastructure as part of a 6-member team.
- Conducted 5+ client interviews, mapping customer journeys and driving a 100% increase in customer enrollment.
- Exceeded Sprint goals 85% of the time while completing AWS certification concurrently with full-time employment
- Resolved 40+ urgent hotfixes during peak usage hours, collaborating closely with DevOps.
- Wrote an 8-page paper and gave multiple presentations on-campus
- Reported development progress to cross-functional stakeholders, emphasizing product value enhancements.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, TypeScript, Java, HTML/CSS

Frameworks: ROS, PyTorch, React, Django, Next.js, Node.js, Express.js

Developer Tools: AWS, Docker, Jenkins, PostgreSQL, Terraform, GStreamer, Git, Agile (Scrum),

Libraries: NumPy, Matplotlib, JUnit, Jest, Styled Components, JoyUI
